APPLICATIONS

SiSiB[®] PC5936 has found new applications as a blocking group. It has been utilized to prepare blocked derivatives of hydroxy compounds. Derivatization of substrates is accomplished efficiently in DMF containing a slight molar excess of imidazole. Blocked intermediates exhibited acidic hydrolytic stability intermediate between that of a SiSiB[®] PC8710 (Tert-butyldimethylchlorosilane) and SiSiB[®] PC8710 (Tert-butyldiphenyl chlorosilane) derivatives. Greater stability was obtained with SiSiB[®] PC5936 under basic conditions.
